

Compliance Statement - RoHS Directive (2002/95/EC)

The Restriction of Hazardous Substances in Electrical and Electronic Equipment (RoHS) Directive was passed into law by the European Union (E.U.) in 2005. It affects manufacturers, sellers, distributors and recyclers of electrical and electronic equipment containing lead, cadmium, mercury, hexavalent chrome, polybrominated biphenyl (PBB) and polybrominated diphenyl ether (PBDE). After July 1, 2006 the use of these materials has been banned in new products sold in Europe.

Multitone is committed to protecting people and the environment and we are continually working on identifying any materials used in our processes that could pose a potential hazard to our employees, customers or the environment.

In 2004, Multitone began the process of converting all of its products to be built without any of the banned materials. The qualification of RoHS-compliant components supplied by our vendors and the implementation of new manufacturing processes related to this Directive, now ensures that all of Multitone's products and their packaging materials sold worldwide are fully RoHS compliant.

The only exception to this will be certain legacy products which have been installed prior to the 2005 Directive implementation date, but continue to receive support and for which RoHS-compliant components are unavailable from the suppliers.
